Name

Daniel Foster

Age

26

Location

Camden, London

Occupation

Architecture

postgraduate student

Background / Context

Daniel recently moved to London for his postgraduate studies in architecture. He is deeply interested in post-war urban development and the cultural impact of disappearing social spaces such as pubs, clubs, and music venues. As a digital native, he is confident using complex research tools, mapping software, and digital archives. However, he lacks direct personal experience of many lost spaces and relies on secondary sources.

Goals & Motivations

To access first-hand personal stories for academic research; to connect memories to specific geographic locations; to understand the emotional and social value of disappearing venues; to identify credible, well-documented historical material.

Needs

Structured, searchable content; story credibility indicators (date, location, supporting materials); a map-based interface linking stories to places; multiple information layers (audio, text, photos, archival references).

Pain Points

Difficulty assessing the reliability of user-generated stories; fragmented information across different sources; emotional distance from places he has never experienced; academic frustration with uncontextualised anecdotes.

"The story matters most when I can see exactly where and when it happened."
